

**It results in hair removal,
treatment of acne, removal of
pigmentation, treatment of
vascular and rejuvenation
of skin**

Ultimate

Revive. Renew. Result.

E-light that is based on a synergy between IPL and Radio Frequency RF.

It can rapidly treat large areas without the limitations that come with traditional lasers, & the use of RF can dramatically reduce the used energy and reach deeper layers.

E-light is used for both skin rejuvenation and laser hair removal.

E-Light combines three advanced technologies: Bipolar RF + IPL + Skin Contact Cooling. Uncomfortable feeling during the IPL treatment will be decreased significantly and better results can be expected with the cooling system involved in E-light. Treatments are efficient in persons with any skin type, but who are not sun-tanned at the time of treatment.

E-light has been clinically proven to accelerate the healing process for acne, long-term removal of many types of pigmented lesions in the upper layer of the skin and quickly removing those thin, spidery veins (technically called telangiectasias) from your face or legs and also reduces enlarged pores. It Promotes collagen to grow and strengthen elasticity of the skin. It is improves skin pigments, corrects skin hyperpigmentation, rosacea, age spots and the appearance of sun damage.

Treatments required are dependant on many factors, Gender, age, ethnic origin, diet, weight, hormones and metabolism are individual factors that have an impact on the result.

Ultimate Advantages and Features

- With 1-10HZ adjustable frequency, the treatment can be done slow or fast.
- Higher frequencies accelerate the treatment speed and shorten a lot the treatment time.
- 2000 W power supply. The IPL multifunctional handpiece can do other treatments, with 5 different filters for different treatment types.

Ultimate can rapidly treat large areas without the limitations that come with traditional lasers, and the use of RF can dramatically reduce the used energy and reach deeper layers.

Optimal Wavelengths for different kind of Procedures and patient customized treatments

5 different filters are available for different treatment options and applications:

- Hair removal
- Acne treatment
- Pigmentation removal
- Vascular treatment
- Skin rejuvenation
- Breast enhancement

During hair removal sessions, IPL is absorbed by the melanin present in the hair during the growth stage, and is then conducted down toward the hair root. This light destroys the follicle of the hair preventing future growth, without any side effect.
